

Contract Transparency Portal — Requirements

AOUSC · BPA for TSO Support Services · Contract 47QTCA20D00C6 · Draft, September 2026

1. Purpose and scope

The Contract Transparency Portal is a customer-facing system that provides visibility into contract execution across all BPA call orders. It consolidates contract, financial, and workforce information that is currently maintained in separate spreadsheets and documents, and it is the place where Project Managers keep that information current.

Scope covers three integrated pillars — Contracts, Financials, and People — plus the reporting deliverables that connect them: weekly status reports authored per call order, and the monthly status report submitted at the BPA level.

Out of scope for this release: invoicing and payment processing, timekeeping, candidate resume handling, and contract modification workflow. The portal reflects those outcomes; it does not execute them.

2. Users and roles

ROLE	RESPONSIBILITY IN THE PORTAL
Customer (Government)	Read-only. Views call orders, financials, staffing, and all submitted reports. Cannot create, edit, upload, or delete any record or file.
Project Manager	Maintains the call orders assigned to them: expenditures, staffing roster and status, and weekly status reports.
Program Office	Onboards new call orders, assembles and submits the monthly status report, and monitors data currency across the portfolio.

3. Sources of record

Initial portal content is derived from the artifacts the program already maintains. Each field has one source of record; the portal becomes the source once a Project Manager updates it in place.

SOURCE ARTIFACT	SUPPLIES
Project Financial Analysis (AO EAC Table and per-call tabs)	Call order list, period of performance, obligated funding, expenditures to date, remaining, estimate at completion, over/under

SOURCE ARTIFACT	SUPPLIES
Call Order Staffing (Resource by Call Order)	Assigned personnel, labor category, rate, contracted FTE and hours by BPA labor category, vacancies
BPA Labor Rate Pricing Sheet	Authorized labor categories and ceiling rates used to validate roster entries
Monthly Status Report (Word)	Per-call-order funding statement, activities completed and planned, travel, high-priority issues and risks
Weekly touchpoint agenda (Word)	Weekly call order highlights, vacancy list, action items, onboarding and PIV status

4. Functional requirements

4.1 Call order register

ID	REQUIREMENT
CO-01	The portal shall present a single register of all call orders under the BPA, including each option period held as a separate funded line.
CO-02	Each register row shall show call order identifier and name, period of performance, number of assigned personnel, funded (obligated) amount, actual expenditures, percent expended, and the date the record was last updated.
CO-03	Selecting a call order name shall open its detail view with Financials, People, and Weekly Status Reports.
CO-04	The register shall display portfolio totals for obligated funding and expenditures, personnel assigned, and open positions.
CO-05	A call order at or above 90 percent expended shall be visually flagged in the register.
CO-06	The Program Office shall be able to onboard a new call order by uploading its award document; the new call order shall appear in the register marked as pending setup until funding, period of performance, and staffing are entered.
CO-07	The register shall be sortable by call order, funded amount, and expenditures.

4.2 Financials

ID	REQUIREMENT
FIN-01	Each call order shall present a funding summary: funds obligated, funds expended to date, funds remaining, estimate at completion, over/under, and percent expended.
FIN-02	Funding figures shall be displayed to the cent and shall state that expenditures lag one invoice cycle.
FIN-03	Each call order shall present its contracted labor categories with authorized FTE, hours, quoted rate, and extended value, plus a total contracted value.
FIN-04	A Project Manager shall be able to update funds expended to date; remaining funds and percent expended shall recompute on save.
FIN-05	Saving a financial change shall record the date of update and display it with the funding summary.
FIN-06	Funded lines with no expenditures shall be identified as not yet started rather than shown as zero-percent burn.
FIN-07	Financial information shall be presented in tabular form. Charts are not required for this release.

4.3 People

ID	REQUIREMENT
PPL-01	Each call order shall list all personnel assigned, with name, labor category, rate, and status.
PPL-02	The portal shall summarize contracted FTE, assigned, vacant, departed, and distinct labor categories for the call order.
PPL-03	Vacancies shall be shown as roster entries carrying their labor category and rate, visually distinguished from filled positions.
PPL-04	Personnel who have offboarded or become unavailable shall be excluded from assigned headcount and shown as departed, so that assigned never exceeds contracted FTE.
PPL-05	A Project Manager shall be able to add a person, remove a person, and change a person's status from a controlled list (assigned, on leave, PIV pending, onboarding, recruiting, offboarded, no longer available).

ID	REQUIREMENT
PPL-06	Existing free-text status notes shall be preserved and displayed; selecting a controlled status shall be an explicit action, never an implicit overwrite.
PPL-07	Any staffing change shall record the date of update and display it with the roster.
PPL-08	The portal shall identify where assigned personnel in a labor category exceed the contracted FTE for that category.

4.4 Weekly status reports

ID	REQUIREMENT
WSR-01	Weekly status reports shall be recorded per call order.
WSR-02	A Project Manager shall be able to author a weekly report in the portal, capturing week ending, submitter, accomplishments, planned activities, risks, issues, and customer actions and decisions.
WSR-03	A Project Manager shall alternatively be able to upload a weekly report document.
WSR-04	All submitted reports shall be retained and listed with reporting period, file, submitter, and status, providing a complete history of contract execution.
WSR-05	Selecting a report shall display its content in the portal without requiring download; uploaded documents shall link to the source file.
WSR-06	Where a program-wide weekly touchpoint covers several call orders, the portal shall present the items belonging to the call order being viewed.

4.5 Monthly status report

The monthly status report is a contractual deliverable submitted at the BPA level. One document covers every active call order; it is therefore maintained as a BPA-level record, not as an attachment to a single call order.

ID	REQUIREMENT
MSR-01	The portal shall maintain a BPA-level log of monthly status reports with reporting period, file, submitter, due date, and status.

ID	REQUIREMENT
MSR-02	The Program Office shall be able to create a draft report for a reporting period, assembled from portal data: funding figures per call order, and activities, risks, and issues drawn from the weekly reports submitted in that period.
MSR-03	Where a call order has no weekly submissions in the period, the draft shall state so rather than present an empty section.
MSR-04	The Program Office shall alternatively be able to upload a completed monthly report document.
MSR-05	Selecting a report shall open a reader listing every call order; selecting a call order shall show its section: funding information, activities completed, activities planned, high-priority risks, high-priority issues, and requested travel.
MSR-06	Call orders with no section in a given report shall be visibly marked as such in the reader.
MSR-07	A report shall carry a status of Draft, Submitted, or Accepted, and shall show its due date so late deliverables are apparent.
MSR-08	Newly awarded call orders shall be included in the monthly report from the period of award onward.

4.6 Data currency

ID	REQUIREMENT
CUR-01	Financial and staffing records shall each carry a last-updated date, displayed wherever the record is shown.
CUR-02	The call order register shall show the oldest last-updated date per call order and flag records not updated within the refresh interval.
CUR-03	The refresh interval shall be configurable by record type. Initial policy: staffing weekly, financials monthly.
CUR-04	Every create, update, and delete shall be attributed to a user and retained in an audit history.

4.7 Roles and access

ID	REQUIREMENT
R0L-01	Customer users shall have read-only access. No create, edit, upload, or delete control shall be presented to them anywhere in the portal.
R0L-02	Read-only enforcement shall be applied server side, not by hiding controls alone.
R0L-03	A Project Manager shall be able to edit only the call orders to which they are assigned.
R0L-04	Monthly report creation and call order onboarding shall be restricted to the Program Office.
R0L-05	Customer and contractor views shall be presented from the same records, so both parties see identical figures.

5. Non-functional requirements

ID	REQUIREMENT
NFR-01	The portal shall meet Section 508 accessibility requirements, including keyboard operation of all controls and text alternatives for status indicators that use color.
NFR-02	Uploaded documents shall be virus scanned, stored with access control matching the call order, and retained for the life of the contract plus the applicable records retention period.
NFR-03	Personnel records shall contain only contract-relevant attributes: name, labor category, rate, allocation, and status. No personally identifiable information beyond that shall be stored.
NFR-04	Register and detail views shall load within two seconds for the current portfolio size, and shall support growth to fifty concurrent call orders.
NFR-05	Any view shall be exportable for offline distribution, and financial and staffing tables shall be exportable as data.

6. Assumptions and open questions

1. Authentication and role assignment are handled by the hosting environment; the portal consumes an authenticated identity and its role.
2. Expenditure figures are entered or imported after invoicing and lag actual performance by one cycle. Whether an automated feed from the financial system is available is open.
3. Deliverable and milestone tracking, described in the original concept, is not covered by these requirements and should be scoped separately.

4. Recruiting pipeline visibility (open requisitions, candidate status, expected fill dates) is anticipated but not specified here; the roster currently carries vacancies only.
5. Whether the customer should see contractor rates, or only labor categories and totals, requires a decision before release.
6. The labor category reconciliation issue noted in the weekly touchpoint suggests a validation rule against the BPA pricing sheet; the enforcement point is open.
